DETAILED ACTION

Status of the Claims

Claims 1-6 are pending.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Information Disclosure Statement

Receipt of the Information Disclosure Statement filed on 05/09/05, 10/18/06 and 02/29/08 respectively is acknowledged and has been entered into the file. Signed copies of the 1449 are attached herewith.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Dinh-Nguyen et al., (GB 1 103 607).

Applicants claim a method for the deuteration of a heterocyclic ring, which comprises subjecting a compound having a heterocyclic ring to a sealed refluxing state in a deuterated solvent in the presence of an activated catalyst selected from a palladium catalyst, platinum catalyst, a rhodium catalyst, ruthenium catalyst, a nickel catalyst and a cobalt catalyst.

Dinh-Nguyen et al., disclose methods of deuterating organic compounds which comprises deuterating organic compounds with deuterium oxide in the presence of platinum catalyst in a closed vessel. See page 1, column 1, lines 38-45; column 2, lines 83-86 and claim 8. Note platinum group catalyst includes the recited catalysts of claim 1.
